DETAILED ACTION

Allowable Subject Matter

1. The indicated allowability of claims 1-13, 15-19 is withdrawn in view of the newly discovered reference(s) to Susuki et al. 3,724,726. Rejections based on the newly cited reference(s) follow.

Specification

2. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: the claimed subject matter "a proximal end", "a distal end", "a protrusion", and "at least one notch" as recited throughout claims 1, 6 and the claimed subject matter "a fin" as recited in claim 6. Further, applicant should provide necessary reference number in the drawing showing the above noted claimed subject matter for better understanding.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-13 are rejected under 35 U.S.C. 102(e) as being anticipated by Susuki et al. 3,724,726.

Susuki et al. disclose a housing cap for securing a dispenser pump (2) to a reservoir (1) as seen in Figure 3, which comprises an annular body (31) having a

proximal end and a distal end, the proximal end having an outwardly extending lip/a flange (3) adapted to sealingly engage a portion of the reservoir, the distal end having a protrusion (see Figure 3 for location of the protrusion) for engaging the pump at a first location, the annular body defining at least one notch (see Figure 3 for the location of one notch) for engaging the pump at a second location, the lip is defined by a helical area protruding from the annular body as seen in Figure 3, the flange encloses at least a portion of the reservoir as seen in Figure 1, a seal (8).

Allowable Subject Matter
